For the permanent contact gloves made of Nitrilkautschuk with a layer thickness of at least 0.20 mm are suitable. The penetration time of this glove material is 480 minutes.

The protective gloves to be used must meet the requirements of EU Directive 89/686/EEC and the resulting harmonising standard EN 374, e.g. KCL Dermatril P, Art. no. 0743. The breakthrough times stated above are based on laboratory measurements by KCL in accordance with EN 374 and are only authoritative for this KCL article.

This recommendation only applies to the product supplied by us and the intended use stated by us. In case of dissolution or mixing with other substances, you must contact the supplier of CE-approved gloves (for example KCL GmbH, D-36124 Eichenzell, Tel. +49(0) 6659 87300, e-mail vertrieb@kcl.de).

OBO makes the recommendation in good faith but accepts no liability for any claims arising from the recommendation or use of the recommended protective gloves.

- **Material of gloves**

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.
